

Training

Go/Golang

Target audience: IT engineers

Length: 2 days

Abstract

Go has established itself as a programming language in recent years, especially in microservices architectures.

Its combination of modern programming language, integrated build and distribution system and living ecosystem have contributed to more and more teams developing and operating their (web) services in Go.

This training is aimed at IT engineers who want to develop their own services with Go or who want to provide support in the operation and debugging of Go applications.

To this end, a complete Go application is developed over the two days, through which the participants become familiar with Go, the associated tools and the ecosystem from end to end. This is done in a practical way: more than 50% of the training is reserved for practical exercises.

Agenda

- Introduction to the basic linguistic concepts of Go
- Programming initial command line programs
- Introduction to the structuring of complex programs
- Managing dependencies
- Concurrency in Go
- Developing a REST service

- Developing a client for the REST service

Note:

- The course fee includes training materials, certificates of participation, lunches, drinks and snacks.
- Participants must bring their own laptop to the training sessions.

If you have any questions about the training, need a hotel recommendation or have any other concerns about our trainings, please contact us at trainings@inovex.de or our Academy Director Collin Rogowski on tel. +49 (0) 172 5673497. Many thanks ! We look forward to you!
