

# IT Architecture Workshop

## Create an infrastructure roadmap in just a few days!

Thanks to twenty years of project experience, we know that building a new IT infrastructure requires an interdisciplinary approach from the very outset. In our architecture workshop, we work with all the stakeholders involved to formulate the aims and requirements of the new infrastructure and to create a joint backlog for the next steps in the process.

### Shared Vision & Goals

- › Interdisciplinary review involving stakeholders, technology managers, and our architecte.
- › Aim: A common understanding of vision & goals.

### Agile Approach

- › Supported by an agile coach.
- › Examines the architecture from all perspectives, from development to security to operation.
- › Takes into account the latest business processes, such as DevOps and SRE, right from the start.

### User Story Mapping

- › ... puts customer satisfaction at the forefront by visually displaying temporal and contextual milestones and dependencies.
- › ... creates the initial backlog and roadmap in order to establish the perfect starting point for successfully modifying your IT structures.

## The Benefits for You

Our workshop for IT architectures enables you to create the initial plan for your new state-of-the-art, agile IT infrastructure in just a few days. We help your agile team to create a roadmap on which to base the initial operational framework of your new system..
